

Use data to unlock your true potential.

Evocon is a visual and user-friendly OEE software that helps manufacturing companies improve productivity and remove waste as they become better.

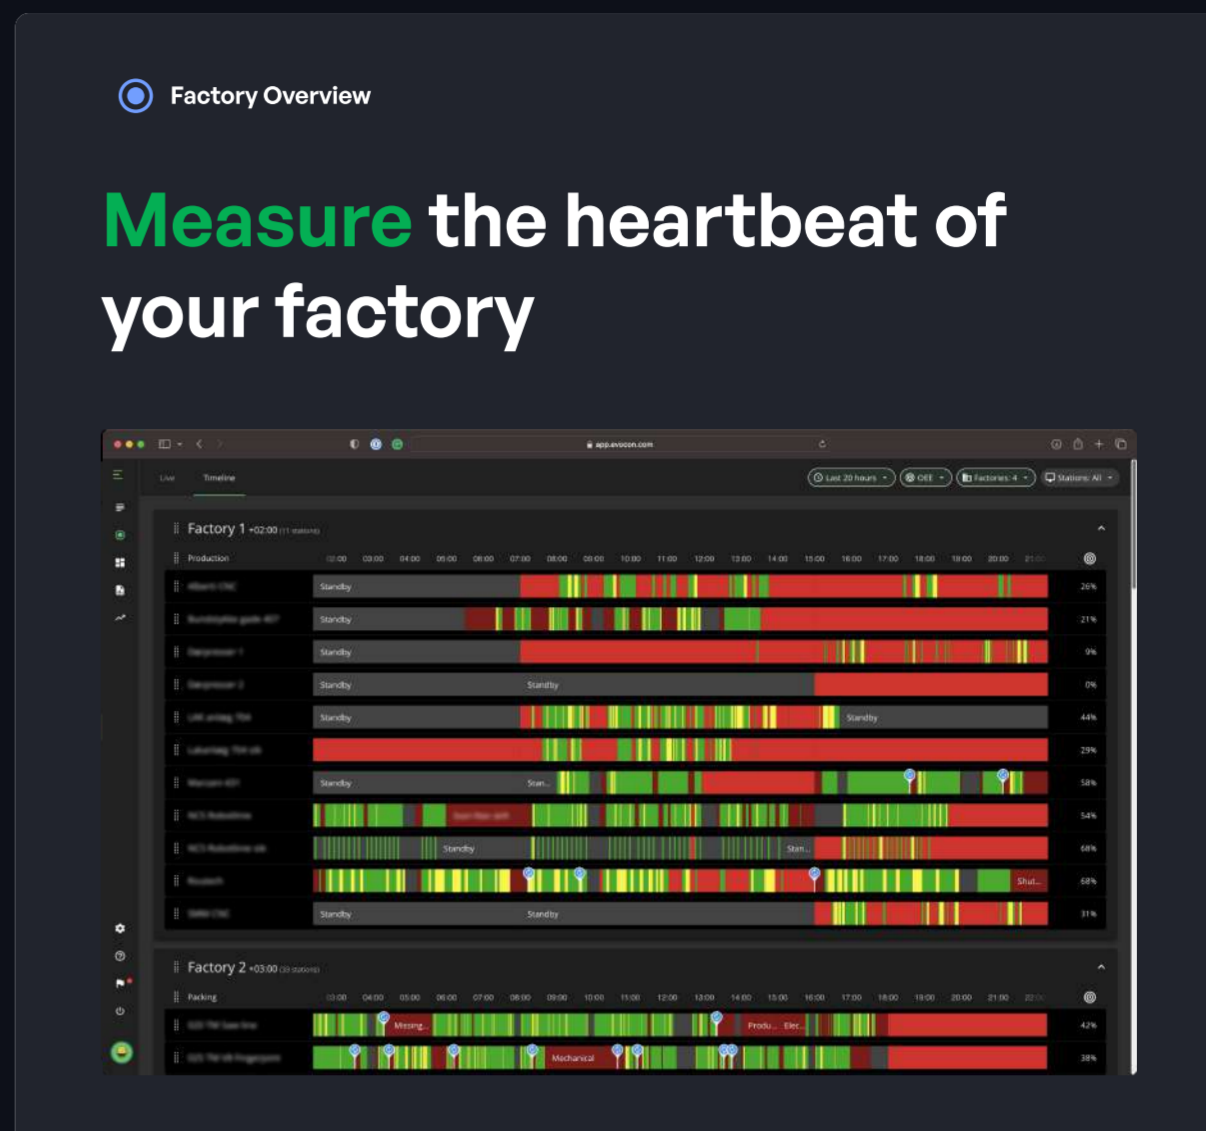

Monitor production & shifts in real-time

Shift View helps you track and analyze all of your production shifts across different dates, stations, factories, and countries. It gives an hour-by-hour overview of what has happened (downtime, speed, quality) and helps you assess the efficiency of your shifts.

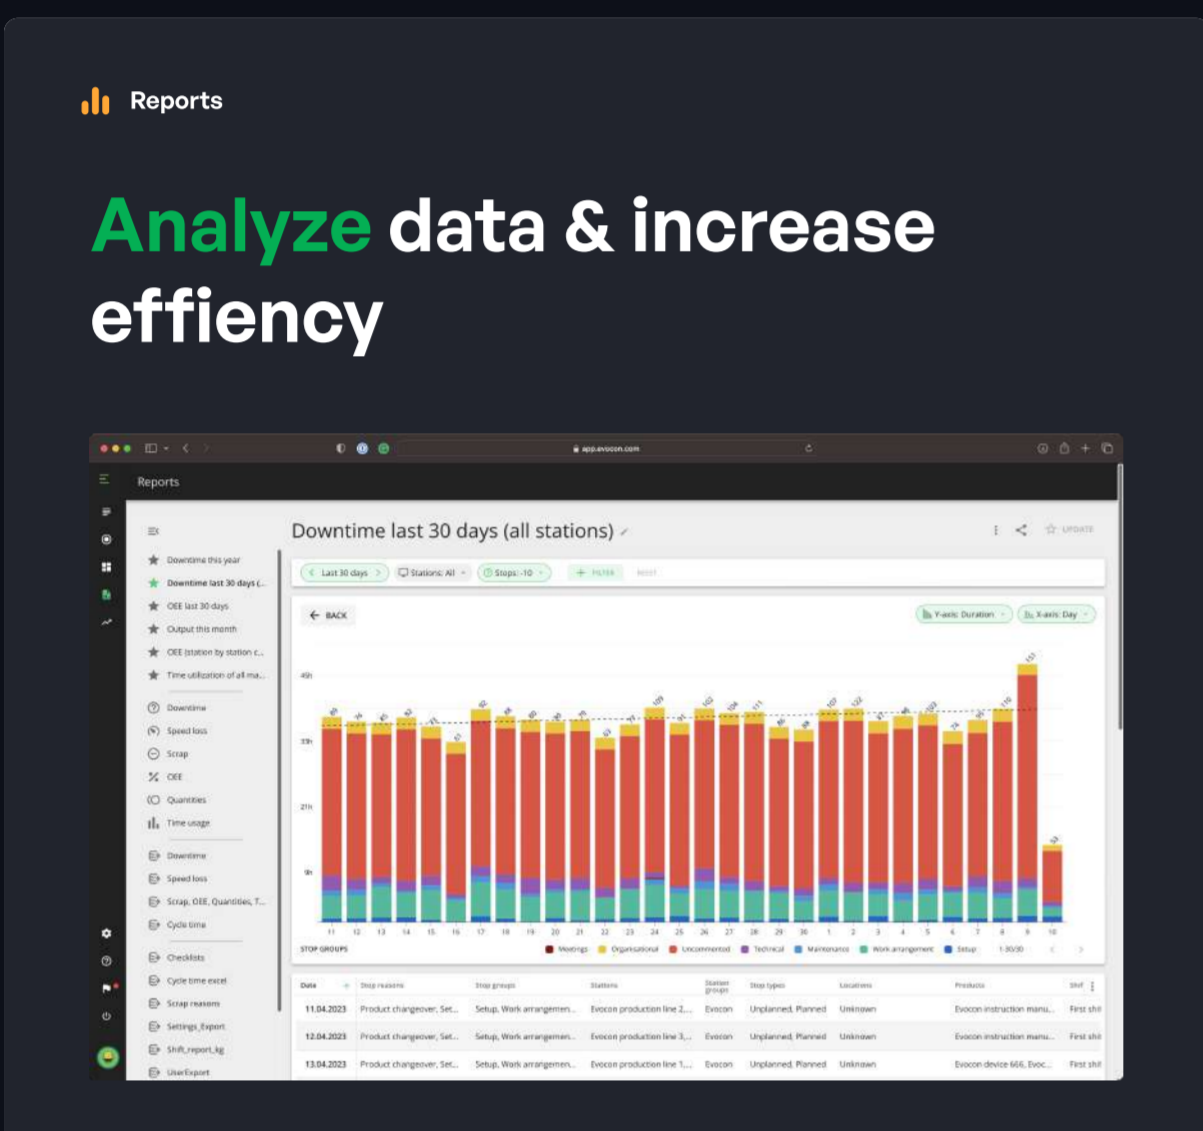

Empower teams with production information

Evocon's Dashboard provides the means to visualize production data and helps monitor production performance in real time and on the go. Use it to upgrade your daily and weekly monitoring process and understand whether things are progressing in the direction you want.

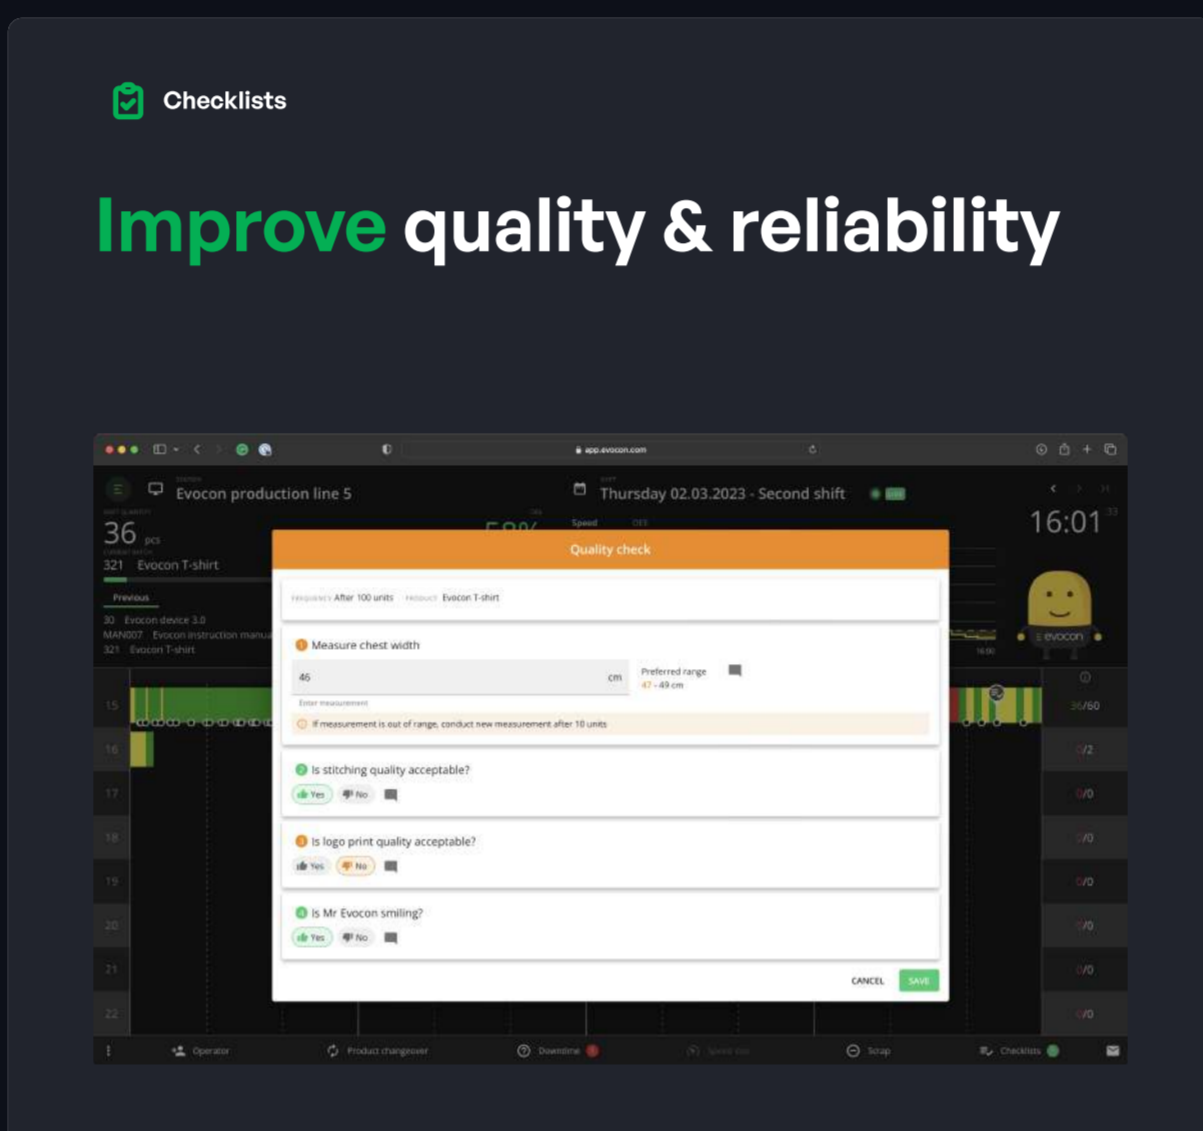

Measure the heartbeat of your factory

With Factory Overview, you make the status of all your machines visible to everyone. This gives your team the transparency they need to manage the factory in real-time and allows them to react to any issues quickly.

Analyze data & increase efficiency

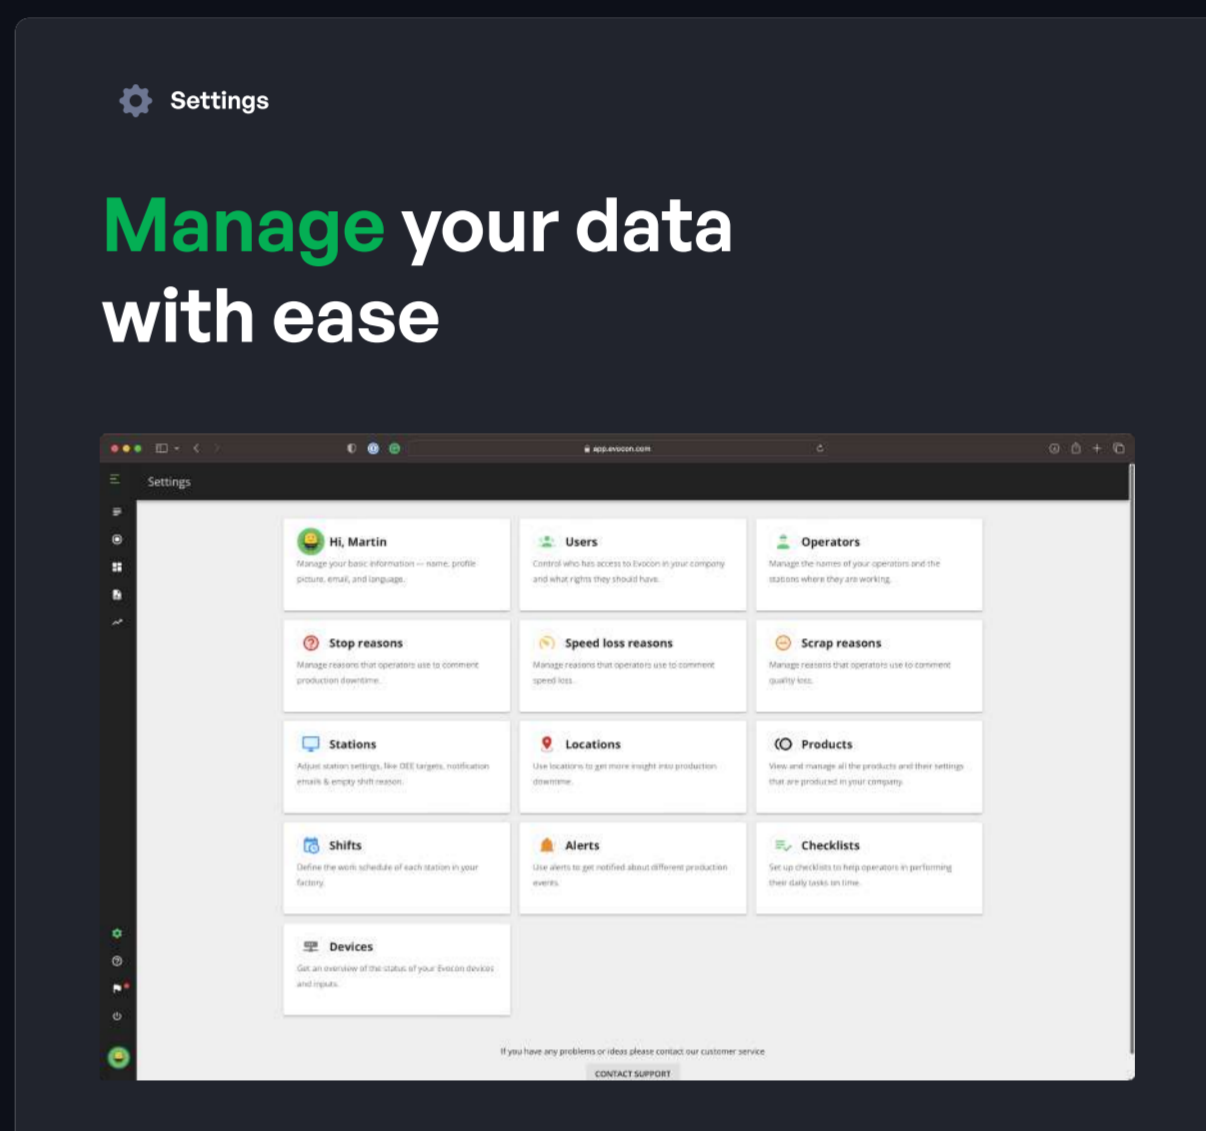

Evocon provides manufacturers with the most impactful production reports and features in order to take action, achieve goals and increase production efficiency. Different reports offer transparency about essential areas, so you know exactly what is going on and why.

Improve quality & reliability

With Checklists*, you can digitize and automate all of your recurring quality and maintenance checks. By utilizing real-time data from machines you enable operators to do relevant checks and tasks at the right time, resulting in the reduction of waste and improvement in quality.

*Additional fee of 29€/month, per machine

Manage your data with ease

Managing all your production data (downtime reasons, shifts, operators, users, products, etc.) is made simple and user-friendly so that anyone in your company can do it.

Start discovering your hidden factory with Evocon's 30 day free trial

All manufactures can try Evocon for free for 30 days with full functionality and with a plan that sets you up for success.

The benefits extend beyond OEE and production monitoring

Accurate production planning

With Evocon monitoring your production, you'll always know how your assets are utilized and your actual production speed. With this knowledge comes an achievable schedule and a plan.

Preventive maintenance

With Evocon monitoring your downtime and technical availability, with clearly linked explanations, you give your maintenance department the information it needs to become proactive.

Cross-factory benchmarking

This standardization of OEE tracking helps you benchmark differences between stations, factories, countries, and regions, leading to increased expertise and sharing of best practices.

Remove unnecessary paperwork

Our IIoT device lets you collect and digitize all relevant data from your production by utilizing sensors, PLC outputs, and HTTPS requests. To ensure security, we store your data on Amazon AWS servers.

Engage everyone

The more people you empower with accurate data, the better your results. With Evocon's unlimited users feature, you can invite everyone in your company to participate in the process of monitoring and improving.

Trusted by manufacturers worldwide
